INTRODUCTION

This project is based on the concept of digital literacy, which is an essential skill in today's technology-driven world. As a Student Digital Ambassador, the objective of this project is to understand and promote the effective and responsible use of digital tools and platforms among peers. The project covers various aspects such as creating a digital awareness infographic, building a professional online portfolio, exploring coding and collaboration platforms, understanding email etiquette, and analyzing cybercrime awareness.

Through these tasks, the project aims to develop practical digital skills, improve online communication, and encourage safe internet practices. It also provides hands-on experience with modern tools like GitHub, Google Forms, and professional networking platforms. Overall, this project helps in building a strong digital presence and prepares students for academic and professional growth in the digital era.

TASK-1

For this task, I created a Digital Literacy Awareness Infographic using Canva. The infographic covers key topics such as the definition of digital literacy, safe internet practices, and the importance of maintaining a professional online presence. I used simple icons, short text, and attractive colors to make the design visually engaging and easy to understand. The goal was to make it useful for students who are new to digital tools.

One interesting aspect of this task was learning how to present information visually instead of writing long paragraphs. However, I found it slightly challenging to organize all the information within a single page while keeping it neat and readable. Overall, this task improved my creativity and design skills and helped me understand how visual communication plays an important role in spreading awareness.

TASK-2

In his task, I created profiles on GitHub, LinkedIn, and Kaggle. GitHub is used for showcasing coding projects and maintaining repositories, LinkedIn is a professional networking platform, and Kaggle is used for data science and machine learning practice.

On GitHub, I created a profile README including my name, branch, and learning goals. On LinkedIn, I added my education details such as my degree, institution, and expected graduation year. These platforms are important for building a strong digital identity.

Over the next four years, I plan to use GitHub to upload projects, LinkedIn to connect with professionals and explore opportunities, and Kaggle to improve my analytical skills. This task helped me understand the importance of maintaining a professional online presence and how it can benefit my future career.

TASK-3

For this task, I used HackerRank and Google Forms. On HackerRank, I complete a beginner-level coding problem, which helped me understand basic programming logic and problem-solving techniques. It was a good starting point for improving my coding skills.

In the second part, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions including multiple-choice and short-answer types. This form can be used to test students’ knowledge about digital safety and online behavior.

These platforms are very useful academically. HackerRank helps in improving coding skills, which are essential for placements, while Google Forms is helpful for surveys, quizzes, and data collection. This task enhanced my practical knowledge of online tools and collaboration platforms.

TASK-4

Poor digital communication can create serious misunderstandings. For example, if a student sends an email without a subject line or proper greeting, it may be ignored by the professor. Similarly, using informal language in professional communication can create a negative impression.

This could be avoided by following proper email etiquette such as using a clear subject line, polite tone, and structured content. In this task, I learned how to write professional emails and the importance of respectful communication. I also created a social media checklist to guide students in using platforms responsibly. This task improved my communication skills and made me more aware of digital behavior.

TASK-5

While researching cybercrime, I was surprised to learn how easily people fall victim to UPI fraud through fake links and calls. Many users are unaware of basic safety practices, which makes them vulnerable.

One important habit I will change is being more cautious before clicking any unknown links or sharing personal information online. I will also ensure to verify payment requests carefully before approving them. This task helped me understand the importance of cybersecurity and how small precautions can prevent major losses.

CONCUSION

The Digital Literacy Project has been an enriching and practical learning experience that has significantly enhanced my understanding of essential digital skills required in today's technology-driven world. Through this project, I explored various aspects of digital literacy, including the use of online tools, creation of a professional digital identity, effective communication, and awareness of cyber safety. Each task contributed to building a strong foundation for responsible and efficient use of digital platforms.

While working on the infographic, I developed creative skills and learned how to present information visually in a simple and engaging way. The digital portfolio task helped me understand the importance of maintaining a professional presence on platforms like GitHub and LinkedIn, which will be beneficial for my academic and career growth. The exploration of platforms such as HackerRank and Google Forms introduced me to coding practice and online collaboration tools, which are essential for modern learning environments.

The email etiquette task improved my communication skills by teaching me how to write clear, polite, and professional emails. Additionally, the cybercrime awareness task highlighted the risks present in the digital world and the importance of taking preventive measures to ensure online safety. It made me more cautious and responsible while using digital services, especially in financial transactions.

Overall, this project has helped me become more confident in using digital tools and platforms. It has also made me more aware of my responsibilities as a digital citizen. The knowledge and skills gained from this project will not only support my academic journey but also prepare me for future professional opportunities in an increasingly digital world.
